Kanban System Design Process

Kanban Floor Implementation

For more than 14 years, Replenishment Technology Group, Inc. (RTG) has led the industry in the design and implementation of Kanban systems. We have authored numerous articles and two books on how to design and implement Kanban. We have taught and implemented Kanban for many fortune 500 companies. Based upon hands-on experience we continue to innovate new tools and methodologies that are widely adopted by international industry and software houses. RTG's strength is its ability to apply the existing MRPII / ERP software packages to calculate and perpetuate a fully automated Kanban system. This level of expertise averts the unnecessary expenditures of new software. We specialize in:

- 1) Designing and implementing both manual and automated Kanban systems.
- 2) Resolving issues with existing Kanban systems regardless of the size of the company. Our clients range in size from \$12 Million to \$10 Billion.
- 3) Redesigning existing MRPII / ERP software packages to eliminate non-value-added activities which significantly enhances the agility in responding to customer demand with minimal inventory.
- 4) Designing and implementing the overall supply chain.

We are also highly versed in Just-In-Time manufacturing giving us the required insight to properly configure your replenishment system. Our approach is simple and straightforward and normally requires no more than one consultant to aid your efforts. We are Replenishment Technology Group, Inc, and we do make a substantial difference.
